We can discuss the list, but before we develop additional COPC maps for several PCB congener groups and other COPC - we need to come to consensus on the mapping.

Hi Rob,

As I mentioned, we went through the list of chemicals found at the site to determine which ones we think should be used to calibrate the model. All of the chemicals on the list below contribute to unacceptable site risks and represent a range of physical/chemical properties, as shown in the attached figure.

Please let me know if you have any questions and/or if you think we should set up a call.

Thanks,  
Stephanie
